

PROOF OF LICE

Head lice is a fact of life amongst school age children. It is not a health risk nor is it a sign of poor hygiene. Head to head contact is the primary way children contract lice.

This is to notify you that:

- ___ We have reported cases of lice at our school and recommend you check your child for signs of lice.
- ___ We have determined your child has lice and recommend you begin a lice treatment immediately.

PROOF OF LICE

Tape lice or nits below. Use the life-size images below to help you identify what you find in your child's hair. *See instructions below.*

Nit off Hair

Nymph

Louse

Safe & effective lice treatment is available. Visit www.HairWhisperers.com for more information about treatment options.

Screening Tips:

1. In a well-lit room, separate the hair into sections.
2. Check for nits (if it flakes off, it is not a nit).
3. Wet the hair and use a good metal lice comb to comb all the way through the hair, keeping as much contact with the scalp as possible.
4. Wipe the comb on a paper towel and check for lice or nits.

Prevention Tips:

- ✦ Discourage children from sharing personal items.
- ✦ Girls should keep long hair in a braid or bun.
- ✦ Routine lice screenings at school and in home are important for preventing infestation.
